

THE PROBLEM: YOUR EMAIL CAMPAIGNS DO NOT ARRIVE.

Sending out email campaigns for years has been the “royal road” to acquire new customers at least possible cost and in big numbers.

Unfortunately these days have become history. Just look into your own inbox to get the irrefutable proof: Unsolicited mail is the exception rather than the rule today.

Reason is:

Spam avoiding techniques after years of development have reached >99.5% efficiency. It simply means that 995 out of your 1,000 mails will **never** reach their recipients.

Really want to bet, yours are the ones being delivered? Don't!

Instead: Decide for a more successful strategy.

ANY SOLUTION?
YES - BUT FAR FROM BEING SIMPLE.

Spam detection today is not only omnipresent, it also uses many different kinds of approaches and manifold multi-step mechanisms.

Which means:

There is no any single step or easy scheme that lets your email campaign arrive. Instead an extensive number of well-coordinated processes has to be implemented to bypass spam detection successfully.

THE DECISIVE STEP: DILUTION

Diluting the real content and in this way hiding it perfectly away is at the very core of DELTA CHECK's "STEALTH MAIL" technology.

Exactly as the prototype of stealth technology, the B2 stealth fighter does, "STEALTH MAIL" hides the real content from detection by significantly reducing its detectable signature.

And as this hide-away process is not static but extremely dynamic, changed for every single mail, even adaptive detection software strikes into empty space.

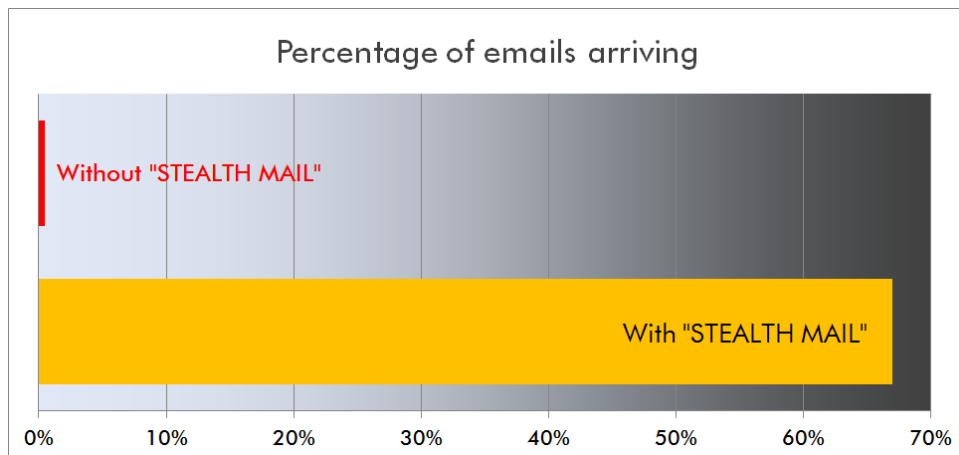

SENT TO ARRIVE

DELTA CHECK's "STEALTH MAIL" technology pursues a single intention:
Letting your email campaigns arrive.

A R R I  E

To make your campaign a complete success.

"STEALTH MAIL" performs this task with exceptional effect:

Without "STEALTH MAIL" only 0.5% of all mails sent do reach your recipient.

Using DELTA CHECK's cutting-edge "STEALTH MAIL" technology brings your quote up to nearly 70%.
